 Parma, Italy

SUMMARY

Accomplished and motivated Communication Engineering Master's graduate with over 1 year of industry experience. Skilled in constructing advanced data models, conducting statistical analysis, and leveraging predictive analytics. Proficient in interpreting and visualizing data, with a strong background in machine learning. Effective communicator with excellent interpersonal and problem-solving abilities. I am Committed to utilizing my expertise to drive growth and success in a progressive organization.

EDUCATION

MASTER OF DEGREE IN COMMUNICATION ENGINEERING
Università degli Studi di Parma

 10/2018 -10/2022  Parma, Italy

• Machine Learning • Statistics • Artificial intelligence

SOFT SKILLS

• Communication Skills • Detail orientation
• Interpersonal Skills • Logical reasoning
• A business mindset • Teamwork

TECHNICAL DATA SKILLS

• Data visualization • Machine Learning
• Data Modelling • Deep Learning
• Data Preparation • Statistical Analysis
• Data Analysis • Mathematics
• Quantitative Analysis • Object-Oriented Programming

DATA TOOLS AND PROGRAMMING

Operating System

• Windows • MacOS
• Linux

Database / Server

• My SQL • SQL SERVER
• NO SQL

Programming Languages

• Python • Scikit-Learn
• OpenCV • SQL
• Flask • Git
• Numpy • Pandas

Other Software / Tools

• TensorFlow • Keras
• PowerBI • AWS
• GCP • Heroku
• NLP • MS Azure
• Docker • MATLAB
• MS Office • Simulink
• CI/CD

EXPERIENCE

Machine Learning Engineer Intern, (Remote work),
Ineuron intelligence pvt ltd

 10/2022 -03/2023  Karnataka, India

- Developed a cutting-edge text summarization machine learning model utilizing deep learning architectures, enabling efficient and accurate summarization of large volumes of text.
- Integrated a CI/CD pipeline for optimizing dynamic data and improving model accuracy by 15%, ensuring efficient updates and continuous improvement.
- Ensured a 99.9% uptime and continuous availability by leveraging AWS EC2 instance and deploying the model using Docker, enhancing scalability and performance.
- Successfully deployed the model on AWS, integrating with GitHub Action for seamless continuous integration and deployment, streamlining the development process.
- Extract data from a database SQL to build a machine learning model to predict the sales effectiveness with 83% accuracy.

Data Scientist Intern, Rubixe

 11/2020 -02/2021  Karnataka, India

- Developed expertise in Machine Learning algorithms such as linear regression, decision tree algorithm, random forest, clustering, and XGBoost algorithms.
- Skilled in data pre-processing and analysis using Python libraries like Pandas and Scikit-Learn, effectively transforming and cleaning datasets for analysis and achieving a 20% reduction in data pre-processing time.
- Acquired hands-on experience in Machine Learning modelling, data analysis, and visualization.
- Developed and implemented "Safety with Shredder Machine" project, utilizing AI, object detection, and OpenCV to ensure worker safety, resulting in a 95% accuracy rate in detecting safety hazards.
- The main objective is to take samples with varying focal lengths of the shredder and employee hand.
- Collected and pre-processed over 3,000 samples for the development of an object detection model, achieving high-quality training data and improving model performance.

PROJECTS

MASTER'S THESIS (ENSEMBLE CNN MODELS)

 02/2022 -06/2022  Parma, Italy

- Implemented several distinct ensemble convolutional neural network models using Keras transfer learning technique on the CIFAR-10 image dataset. Developed deep learning models to achieve high accuracy and robustness for classification and detection tasks.
